Introduction

About the Company

Bohamet S.A. is a company with a rich history, having started its operations in 1985. Founded by Jarosław Halarewicz and Henryk Bogusz, it remains in the hands of its founders to this day, reflecting the stability and consistent growth of the enterprise. Over 40 years on the market, Bohamet has established a solid position, dynamically expanding its activities across various industrial sectors and building a brand based on experience and trust.

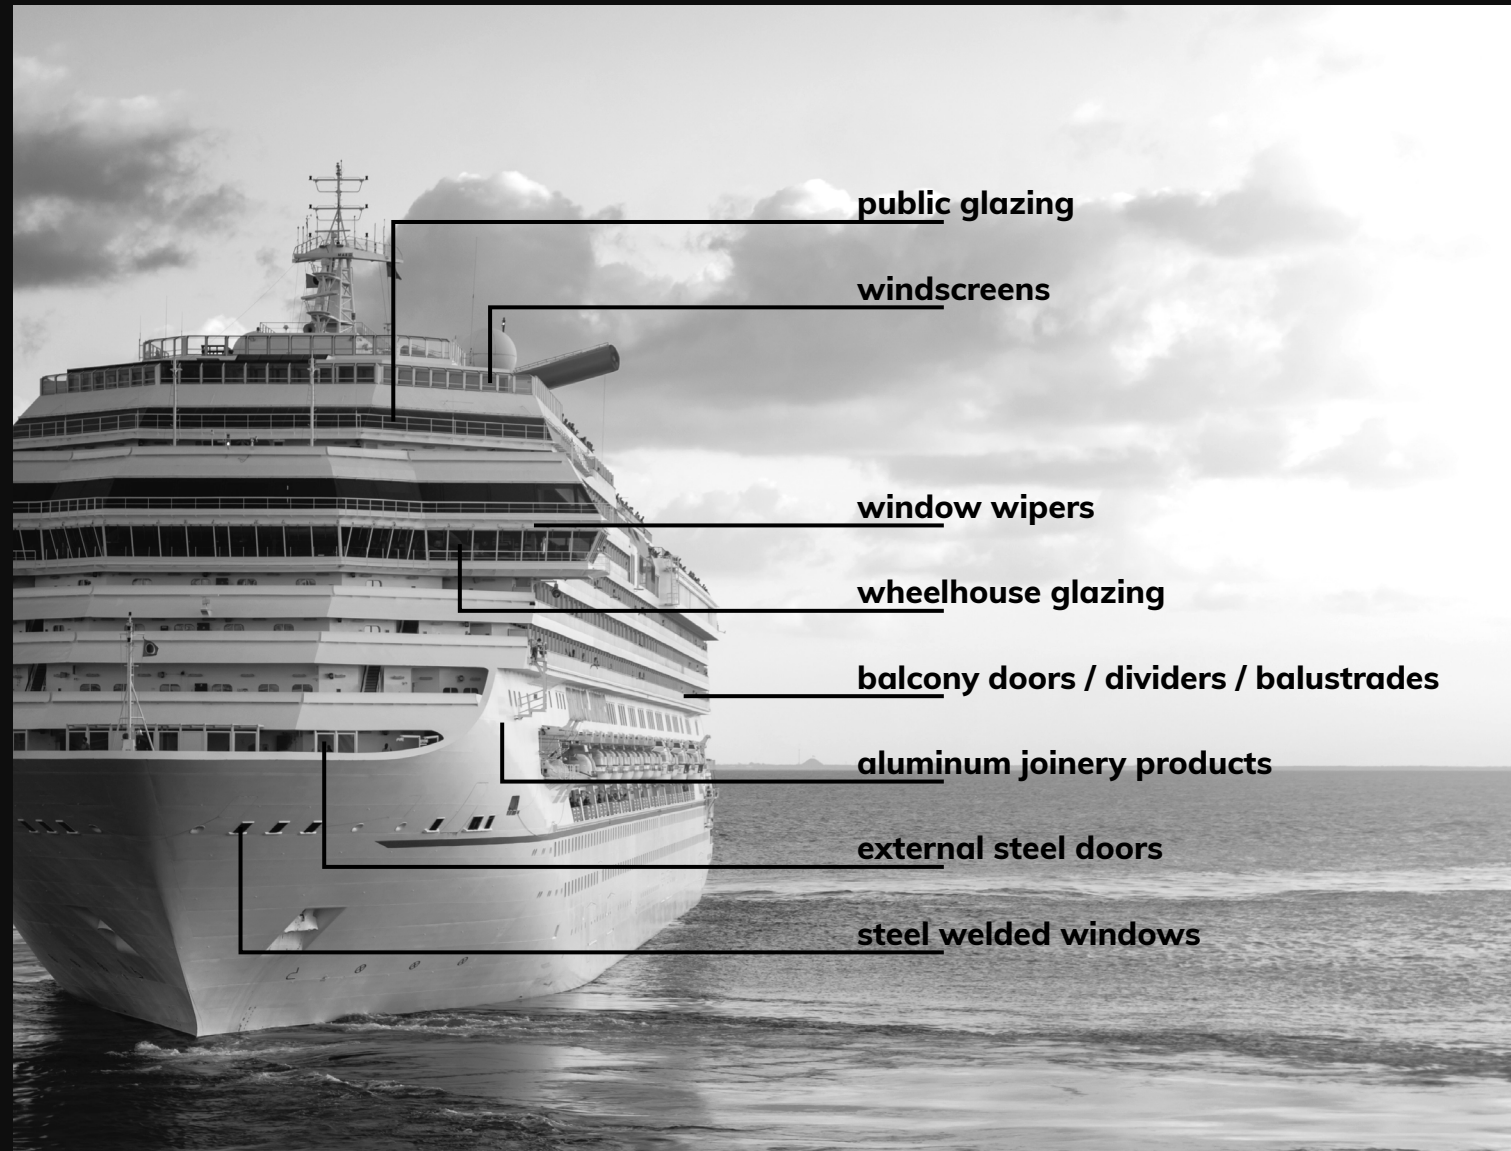

The main pillar of the company's operations is production for the maritime sector, where Bohamet has gained wide recognition both domestically and internationally. This success is the result not only of specialized knowledge and high quality products but also of strategic and well-thought-out investments that the owners have been consistently implementing since the company's inception.

02

Windows and scuttles

Clear Vision, Maximum Safety

Crafted from aluminum, steel, and stainless steel, our windows meet the highest classification society standards and international ISO (3903 / 1751) requirements. We offer specialized designs, including wheelhouse, trapezoidal, divided, oval, and partially opening windows, as well as high pressure solutions for bathyscaphes and submersibles.

At Bohamet, we go beyond manufacturing - offering engineering support, calculations, testing, and seamless installation to ensure top quality and safety. For added functionality, our windows can be equipped with ship wipers, clear view screens, sun shades, and deadlights.

03

Doors and hatches

Protection & Performance

In the marine industry, safety and quality are paramount. That's why we continuously refine and enhance our door designs to meet and exceed customer expectations.

Bohamet delivers top tier weathertight, watertight, and spraytight ship doors, along with fully customized solutions tailored to unique specifications.

With a wide range of designs, sealing standards, fire classifications, finishes, fittings, and accessories, our doors provide the reliability and protection essential for every vessel.

04

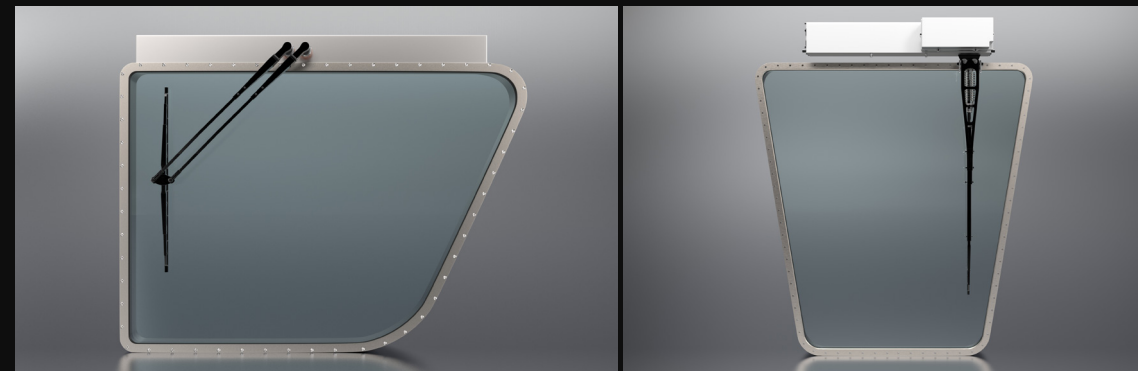

Wiper systems

Weather the Storm

Our wiper systems are built to withstand the demanding conditions of naval operations, ensuring exceptional durability and longevity. The range includes pantograph and horizontal models, including lightweight aluminum options, all complemented by advanced control panels and an efficient washing system.

Designed for seamless performance, our wipers operate with minimal noise and feature patented innovations for effortless maintenance. With integrated heating and high IP protection, they ensure reliability in any environment and are trusted worldwide.

Engineered with a streamlined design and premium materials, Bohamet wipers guarantee smooth operation and hassle free maintenance, with an optional built-in washing system for enhanced functionality.

05

Aluminum systems

Combining Lightness with Durability

For over a decade, Bohamet S.A. has been designing and manufacturing high quality, custom aluminum windows and doors for passenger ships. Our range includes weathertight balcony sliding (18kPa) and hinged doors (20kPa), as well as balcony windows, dividers, and balustrades, available in various configurations, including ADA-compliant options.

Constructed from durable aluminum profiles with welded or bolted pillars, our balcony dividers are treated for marine environments, with stainless steel and anodized aluminum fittings ensuring long lasting durability. We also produce interior and exterior aluminum doors and windows for public and specialized applications.

06

Performance glass

Meeting Diverse Industry Needs

Bohamet S.A. delivers advanced glass solutions tailored to the demanding conditions of the maritime industry. From thermally insulated glass to EMC shielding and noise reducing variants, our products enhance safety, comfort, and efficiency on board. Electrically heated glass prevents condensation, ensuring optimal visibility in all conditions.

For design flexibility, we offer curved and decorative glass, including Priva-Control® technology for adjustable transparency. Every solution meets the highest international standards, ensuring durability and peak performance in extreme marine environments.

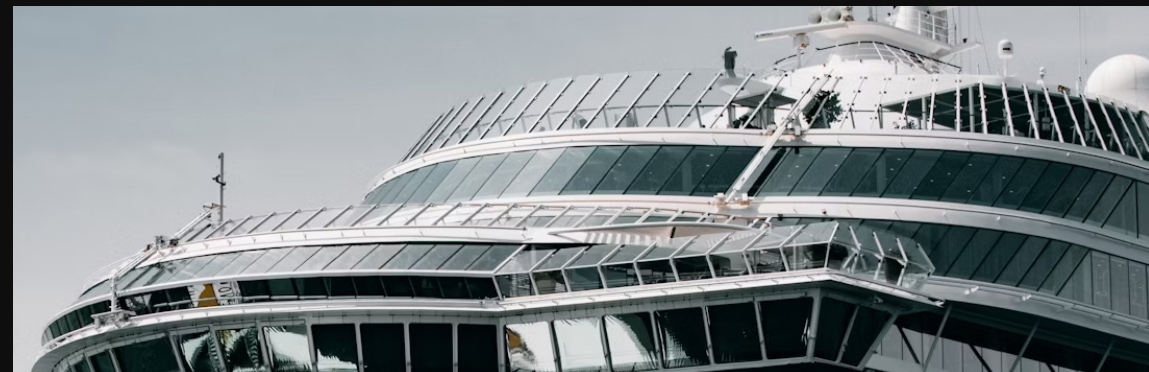

07

Public space glazing

Next-Gen Glazing Solutions

BOHAMET S.A. holds a leading position in the field of innovative marine glazing, creating specialized solutions tailored to the demanding conditions on cruise ships. Our proprietary production cycle combines state-of-the-art technology with precise craftsmanship.

Our comprehensive portfolio includes an impressive range of high-quality glazing options, from crystal-clear float glass to sophisticated extra white and mass-tinted variants. Each product undergoes rigorous processes to ensure the perfect balance between structural strength and safety, along with excellent insulation properties. The result? Glazing solutions that offer not only exceptional optical clarity and aesthetics but also provide key safety features, including advanced fire protection and enhanced resistance to external threats - creating beautiful spaces without compromising passenger safety.

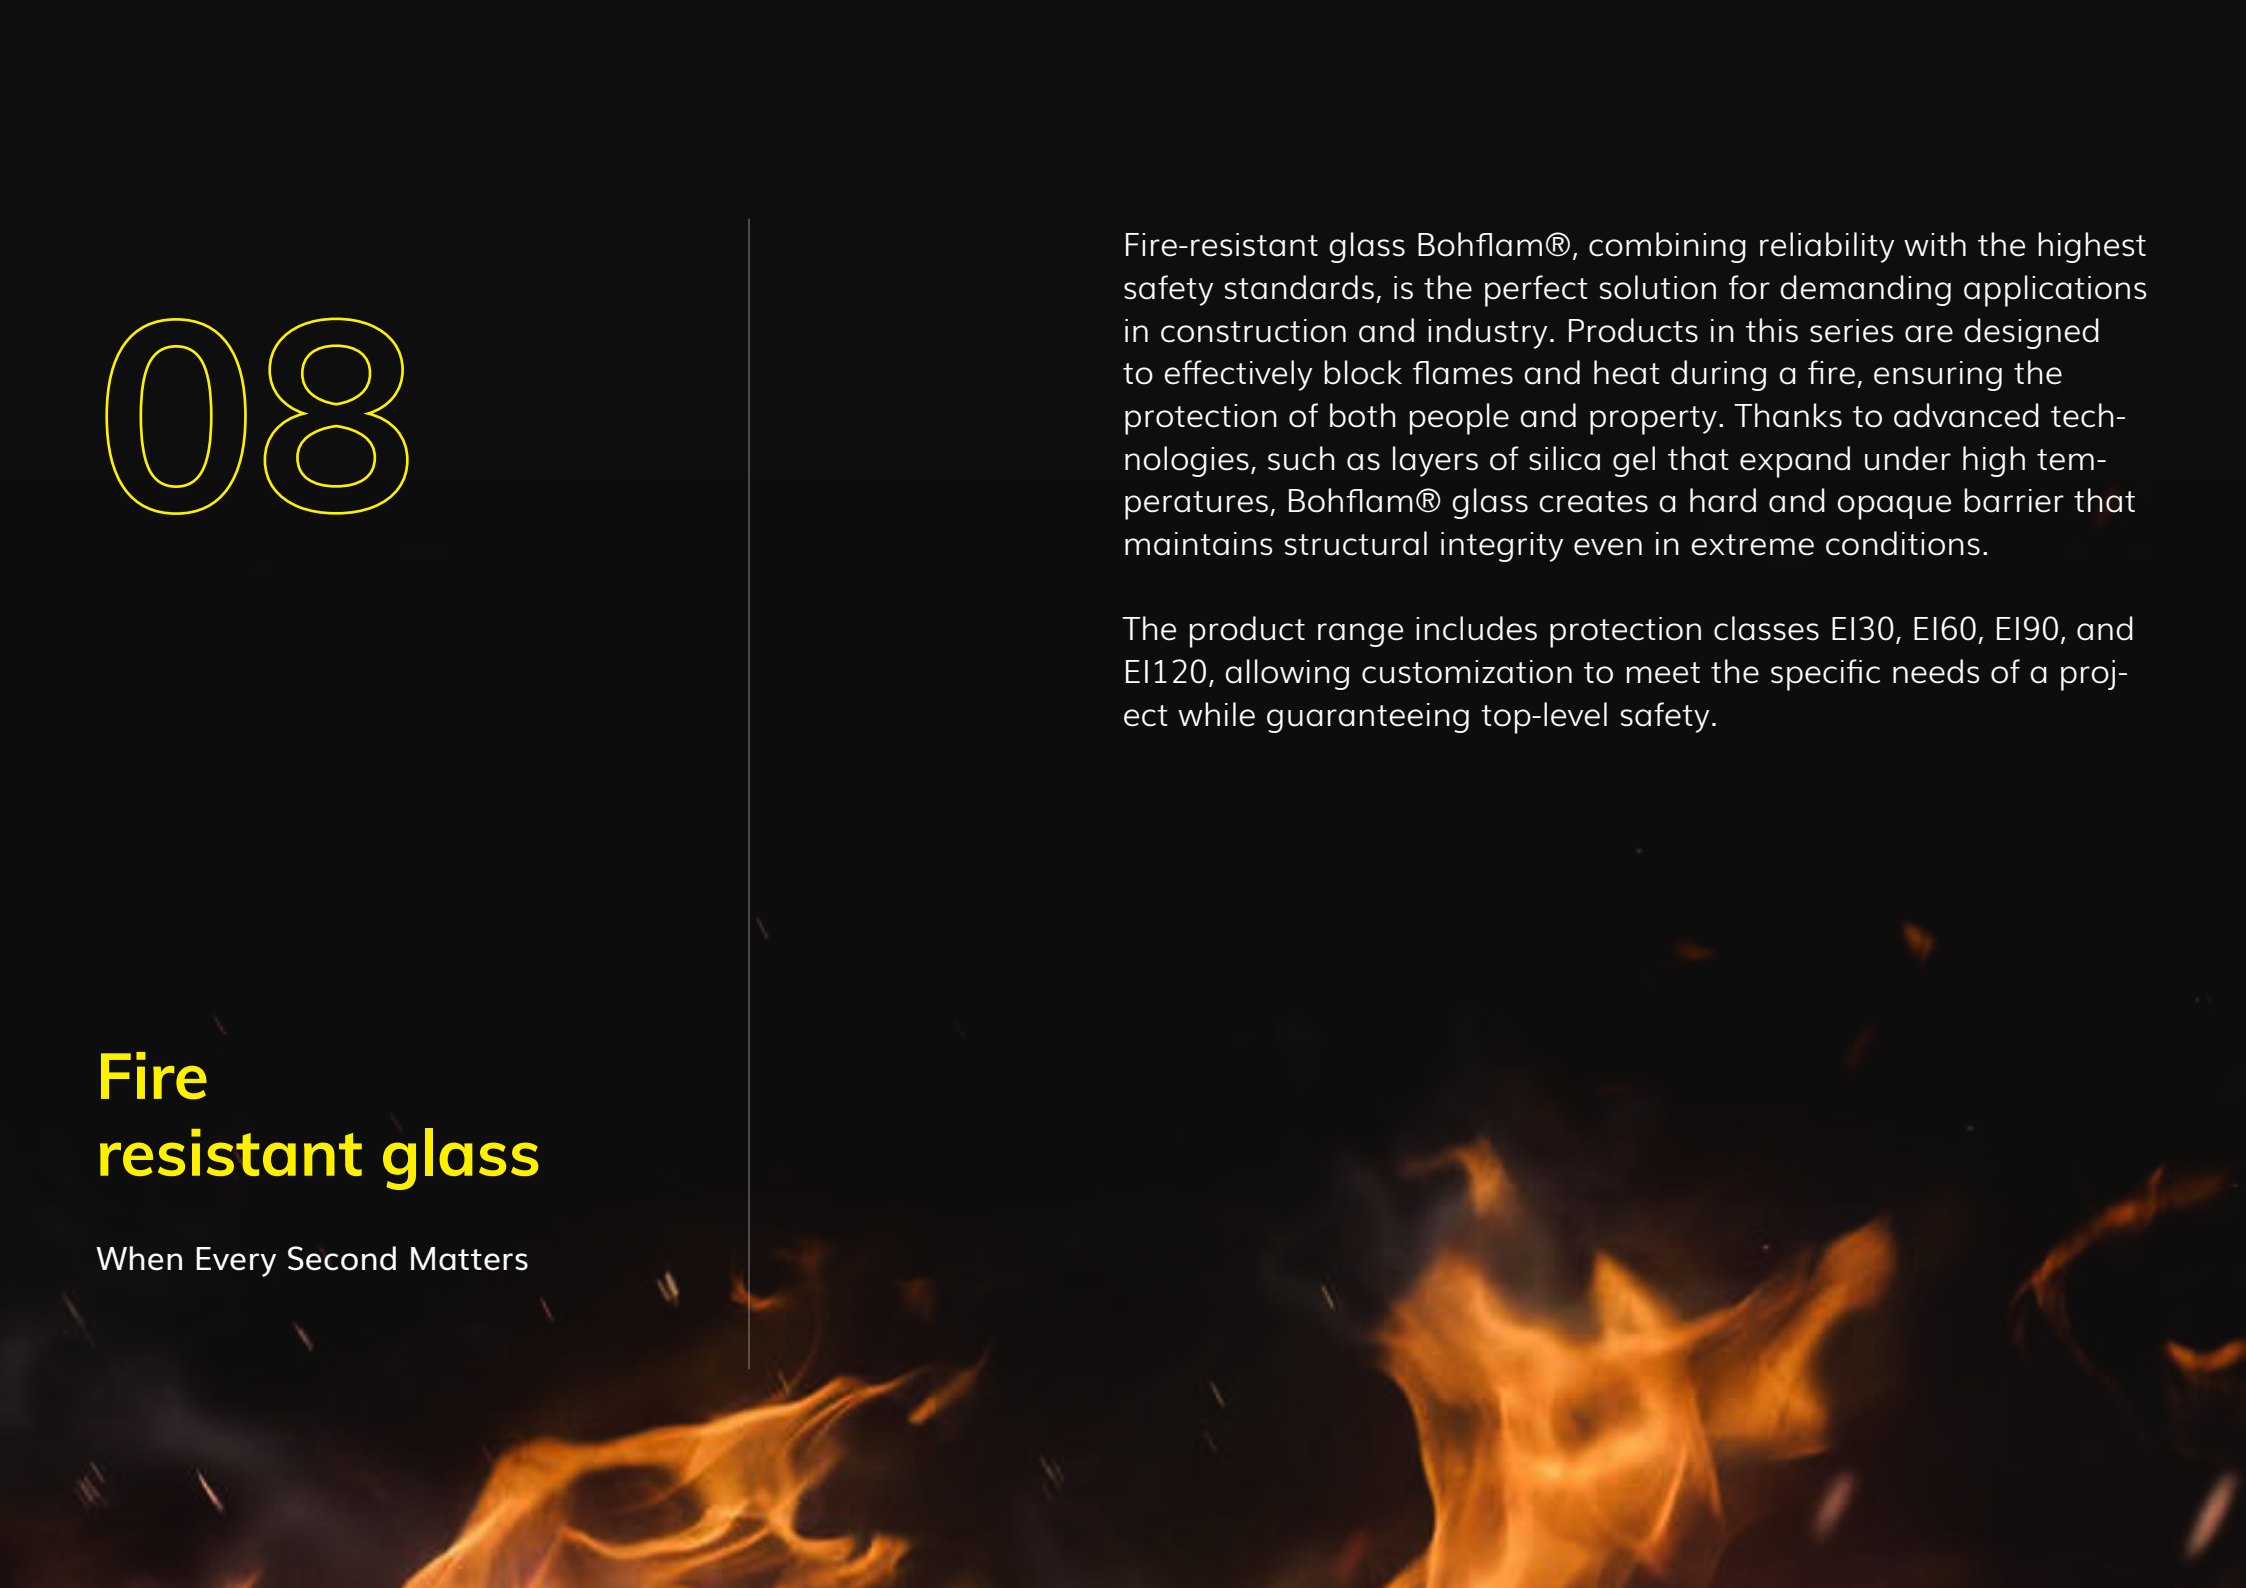

08

Fire resistant glass

When Every Second Matters

Fire-resistant glass Bohflam®, combining reliability with the highest safety standards, is the perfect solution for demanding applications in construction and industry. Products in this series are designed to effectively block flames and heat during a fire, ensuring the protection of both people and property. Thanks to advanced technologies, such as layers of silica gel that expand under high temperatures, Bohflam® glass creates a hard and opaque barrier that maintains structural integrity even in extreme conditions.

The product range includes protection classes EI30, EI60, EI90, and EI120, allowing customization to meet the specific needs of a project while guaranteeing top-level safety.

09

Bullet resistant glass

Solutions for High-Risk Environments

Bohamet Armex® is an advanced technological product that combines the highest level of ballistic protection with aesthetics and transparency. Thanks to its multi-layered laminated glass structure and special interlayers, this glass effectively absorbs the energy of bullets, preventing penetration.

Bohamet products meet stringent standards, including EN 1063 and STANAG 4569, offering various levels of protection - from BR4S (resistance to handgun bullets) to BR7S (protection against rifle fire). This makes Bohamet bulletproof glass suitable for use in banks, jewelry stores, government buildings, as well as military and diplomatic vehicles, ensuring safety in the most demanding conditions.

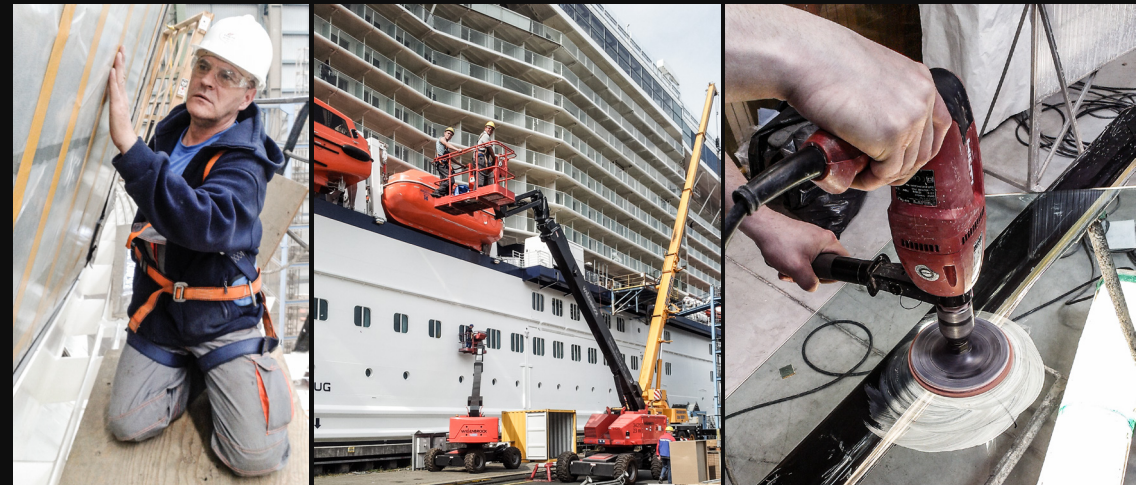

10

Service and repair

Keeping Your Equipment Shipshape

At Bohamet S.A., we provide expert service and repair solutions to ensure the longevity and reliability of your marine equipment. From routine maintenance to complex overhauls, our team delivers precision repairs that restore full functionality while minimizing downtime.

With a commitment to quality and efficiency, we offer comprehensive support for windows, doors, hatches, and wiper systems, extending their lifespan and optimizing performance. Wherever your vessel operates, our global service network ensures rapid response and expert assistance when you need it most.
